

Technology Committee Meeting
8/16/21

Members Present: Brett O Berg, John Ravnum, Henry Schantzen

Items for discussion:

- Brett has cycled through Chromebooks returned by families-4 were recycled for damage. Rest are stored in the computer lab. He also recycled a huge amount of old tech, tvs, and other outdated or broken devices. He is keeping a log on the Tech inventory spreadsheet.
- Soft link-Brett: John sent it to Brett, and he couldn't make it work to get it to push through to the Erdkinder Chromebooks. Was based on the active directory. John and Brett will get together at 12:30 on a M or W in the coming weeks and get that done. Needs "DNS snap in".
- Infrastructure at BMS appears to be working well. No significant issues or drops during testing, so it appears to be solid.
- Vision Design moved us to a different server, DNS managed by John to make sure it is working.
- Remote sessions with JMC have been an issue in the past. When we need to do a remote session, John will be contacted to resolve it.
- New version of Microsoft would be great on the server and then pushed out via the active directory.
- Upgrade of the operating system by John and Brett the week of March 7th, 2022. This gives John time to manage the work on his end. The Domain Controller will have to upgrade first, followed by the library server which controls printing and other functions.
- Update Maintenance manager computer, must run HVAC on Internet Explorer
- Update HOS laptop operating system
- SPED Chromebooks-management software. Brett needs login. Will get him admin on G-suite on Wed.
